

PRESTIMPORT: Prestashop Interface

Overview

This extension allows you to import Prestashop order data into Gestan invoices.

Configuration

Configuration is carried out via the Tools → Application Settings → Extension Settings menu.

The screenshot shows a web-based configuration window titled "Additional parameters" with a sub-header "Extension PRESTIMPORT". The window has two tabs: "Country" and "Product and VAT", with the latter being the active tab. Under the "Product and VAT" tab, there is a section "Setting VAT rates" containing a "Country" dropdown menu set to "FRANCE" and a "VAT" input field set to "20,00". Below this, there is a "Transport / Shipping" section with a "Port" dropdown menu. At the bottom of this section is a checkbox labeled "Mention GBR VAT exemption" which is currently unchecked. At the bottom right of the window are two buttons: "Confirm" with a checkmark icon and "Close" with an 'X' icon.

This screen allows you to select the product family for any transport and delivery charges. It also allows you to configure the VAT rates used.

Close

The 1 button allows you to select the file to be processed, and the **Import** button triggers the process.

 If a town is not found in the postcode file, it is automatically added. Please check that the information is correct before importing the data.

 If the products in the file support stock management, stock movements are automatically created. Any stock alerts will be displayed in the **Stock Alerts** tab.

Total Delivery Cost (excl. VAT) | Total Amount Paid (excl. VAT) | Unit Price (excl. VAT) | Product price incl. VAT | Product minimum order value excl. VAT |
