

PRESTIMPORT: Prestashop Interface

Overview

This extension allows you to import Prestashop order data into Gestan invoices.

Configuration

Configuration is carried out via the Tools → Application Settings → Extension Settings menu.

The screenshot shows a web browser window titled "Paramètres complémentaires" with a standard window control bar. Below the title bar is a blue header for the "Extension PRESTIMPORT" with a wrench and screwdriver icon. The main content area has two tabs: "Pays" and "Produit et TVA", with "Produit et TVA" being the active tab. Under the "Paramétrage des taux de TVA" section, there is a "Pays" dropdown menu set to "FRANCE" and a "TVA" input field set to "20,00". Below this is a "Transport / Expédition" dropdown menu set to "Port". At the bottom of the configuration area is a checkbox labeled "Mention GBR Exonération de TVA" which is currently unchecked. At the bottom right of the window are two buttons: "Valider" with a checkmark icon and "Fermer" with an 'X' icon.

This screen allows you to select the product family for any transport and delivery charges. It also allows you to configure the VAT rates used.

Fermer

The **Country** tab allows you to import a country mapping file if this differs from the default one.

Usage

Access: *Business* → *Prestashop Import*

Importer des factures Prestashop

Importation de factures Prestashop

Fichier source  

Importation | Alertes stock

Id	N° commande	Nom acheteur	Prénom acheteur	Nom destinataire	Prénom destinataire	D	Instructions de livraison	Adresse de l'acheteur 1	Adresse de l'acheteur 2

Code produit	Libellé produit	Quantité	PU HT	PU TTC	Prix HT	Montant TVA	Prix TTC	%TVA

The 1 button allows you to select the file to be processed, and the **Import** button triggers the process.

 If a town is not found in the postcode file, it is automatically added. Please check that the information is correct before importing the data.

 If the products in the file support stock management, stock movements are automatically created. Any stock alerts will be displayed in the **Stock Alerts** tab.

 Some alphabets may not be recognised by the extension. The relevant row will then be displayed in red and the relevant columns will show “Unrecognised characters”. You can edit these elements directly in the table before importing the data.
