

Gestan extensions

A1 proofreading not yet effective for this page. In the meantime, you can ask any questions on the [forum](#).

Gestan extensions enable you to add a number of specific functionalities to Gestan, in a fully integrated manner.

They can be developed by ICS-Informatique, Gestan's editor, or by any partner with a "development" qualification. In the latter case, the source codes for these developments are deposited with ICS-Informatique, which guarantees their continuity and legality.

Using the screen

Access : *Tools* → *Administration* → *Extensions*

Nom	Auteur	Description	Inst	A	Versipn installée	Version disponible	R	PU HT	P	Création	Par

Gestion d'un carnet de bord pour les véhicules : kilométrage, consommation de carburant, maintenances, etc

The screen displays the list of available extensions, by category.

The **Info** button opens the wiki page corresponding to the extension.

The **Install** button installs the extension, the **Uninstall** button uninstalls it. Technically, installation downloads the .wdl file corresponding to the extension, and installs it in the user's Appdata directory (C:\Users\[windows user]\AppData\Roaming\GESTAN15\).

To update an extension, uninstall it using the **Uninstall** button, then reinstall it.

On the library list screen, the **Act/Dsct** button enables you to activate, or not, the library for the current Gestan database, for each user. You can also double-click on the column.

 Port 3306 must be available for Gestan to query the MySQL database containing the list of available extensions.

Installing an extension causes :

- a sub-menu may be added to the **Business** menu in Gestan's main menu;
- a sub-menu may be added to one of Gestan's existing menus;
- the possible addition of a settings menu in the Tools → Application settings→Extensions settings menu.
