

Network Computers

A1 proofreading not yet effective for this page. In the meantime, you can ask any questions on the [forum](#).

Access: *Tools* → *Administration* → *Users* → *Network*

This screen allows you to control the access of physical machines to Gestan, via their Mac address: you can only authorize this or that machine on your network.

Adresse MAC	Adresse IP	Nom réseau	Libellé	Dernier login	Dernière connexion	Nb sess	A	C	Création	par	Modification	
a0:8c:fd:e6:62:1d	192.168.1.16	ICS01-PC01	Ordinateur de K ICS01	08/01/21 18:12:47	08/01/21 18:12:47	2	✓	✓	30/10/19 22:59:59	EN	08/01/21 03:10:2	Supprimer
												Int/Aut
												Fermer

The screen presents the list of computers that have connected to the base.

The **Int/Aut** button allows you to manage connection authorizations by MAC address: you can prohibit or authorize each machine on the network to connect to the Gestan database. Column **A** indicates the connection authorization status for the MAC address in question.

The **C** column indicates the connection status of the machine concerned (connected/not connected), while the **Nb Sessions** column displays the number of active sessions.

According to the general configuration (see [explicit network](#)), if a machine whose MAC address is not listed connects:

- if explicit network is checked, the connection is refused
- if explicit network is not checked, a new record is created, with connection authorization.
