

# Favorites and passwords

A1 proofreading not yet effective for this page. In the meantime, you can ask any questions on the [forum](#).

Gestan lets you save various codes and passwords, as well as the corresponding URLs for websites.

Shortcuts can be classified by type, to facilitate display if there are many of them.

If the URL is entered, the **Browse** button launches the default browser on the URL in question.

## Tips for managing bookmarks

### Generation of random passwords

On the shortcut card screen, a 1 random password generation button can be used to create a password that is reasonably difficult to find.

Right-click on this button to set random password characteristics: length, with or without digits, etc.

### Access to FTP sites

If you begin your shortcut url with [ftp://](#), Gestan will be able to connect to the FTP site via your browser, if you have entered the access code and password.

### **icons associated with shortcuts**

Gestan comes with a set of icons - thanks famfamfam - so you can delete the ones you don't need, and add your own: just put them in the <Installation directory>\RESSOURCES\ICONES} directory (usually C:\Program Files X86\GESTAN\RESSOURCES\ICONES). Use 16\*16 icons!
