

Rental planning

A1 proofreading not yet effective for this page. In the meantime, you can ask any questions on the [forum](#).

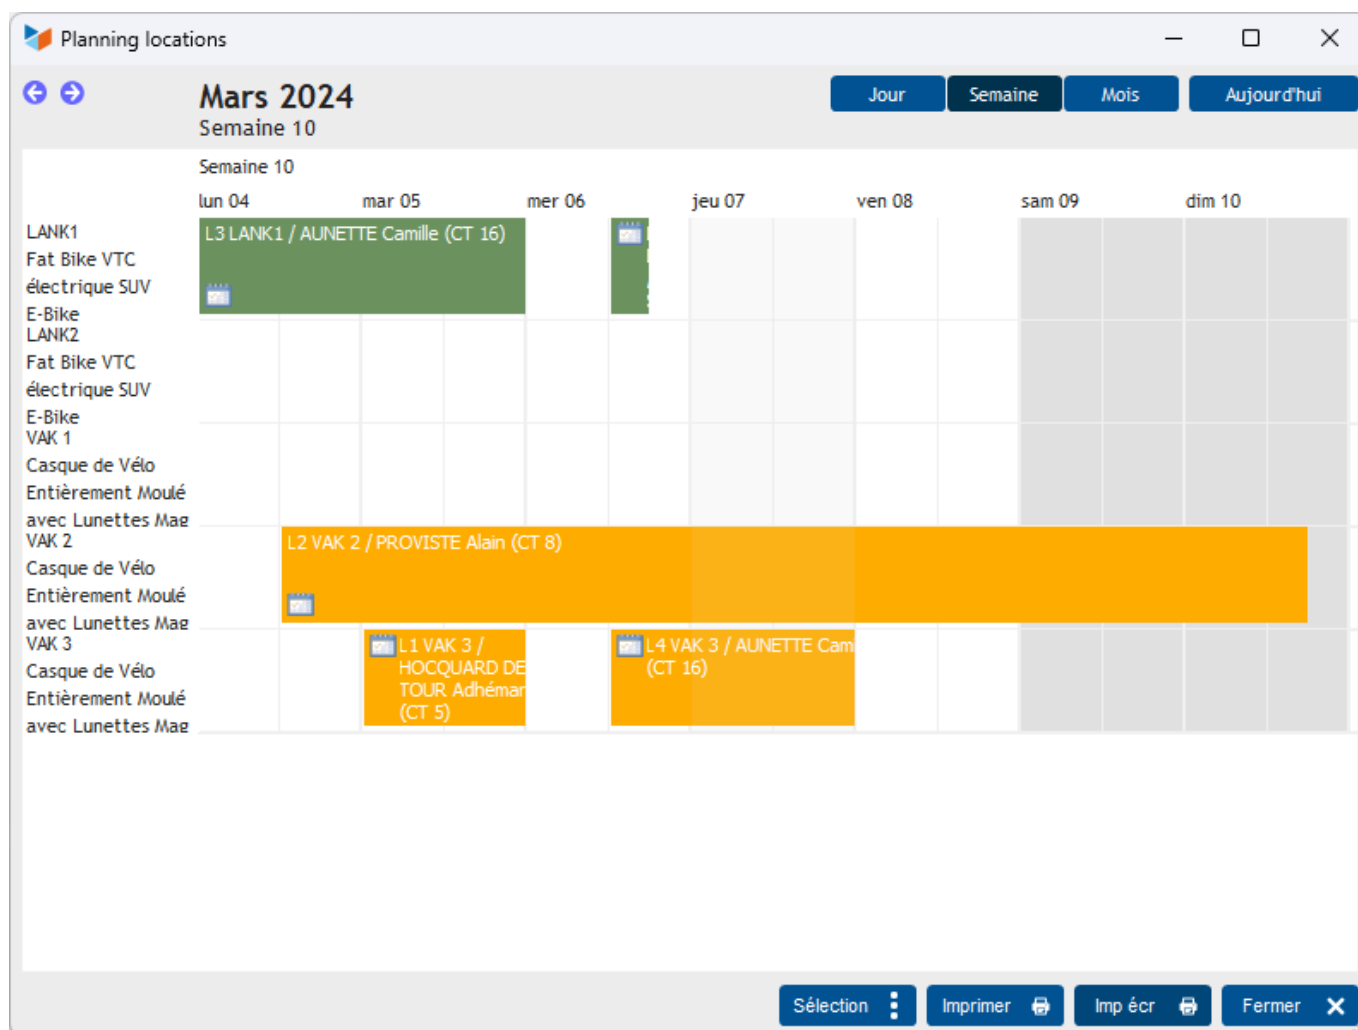

With Gestan, you can manage rentals or loans [en mode monoligne](#) or [en mode multilignes](#).

In both cases, they can be displayed on the rental schedule.

Using the screen

Access: via the Schedule button on the rental list screen

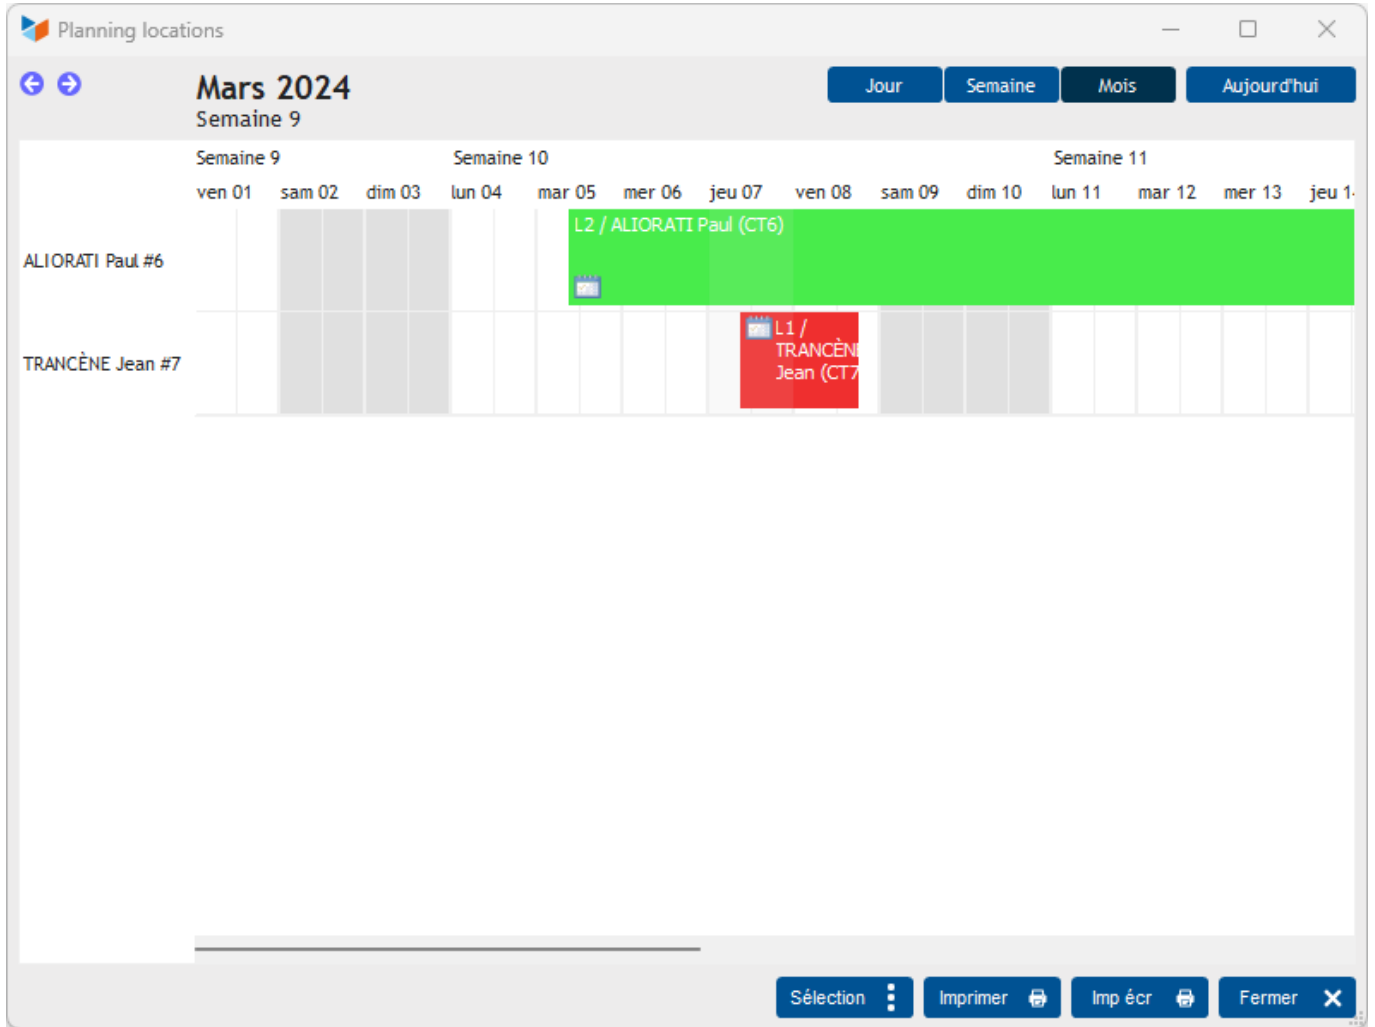

Single-line rentals

Planning displays machine names as resources (for example, the names of hotel rooms).

Colors are displayed according to the type of machine.

Multiline rentals

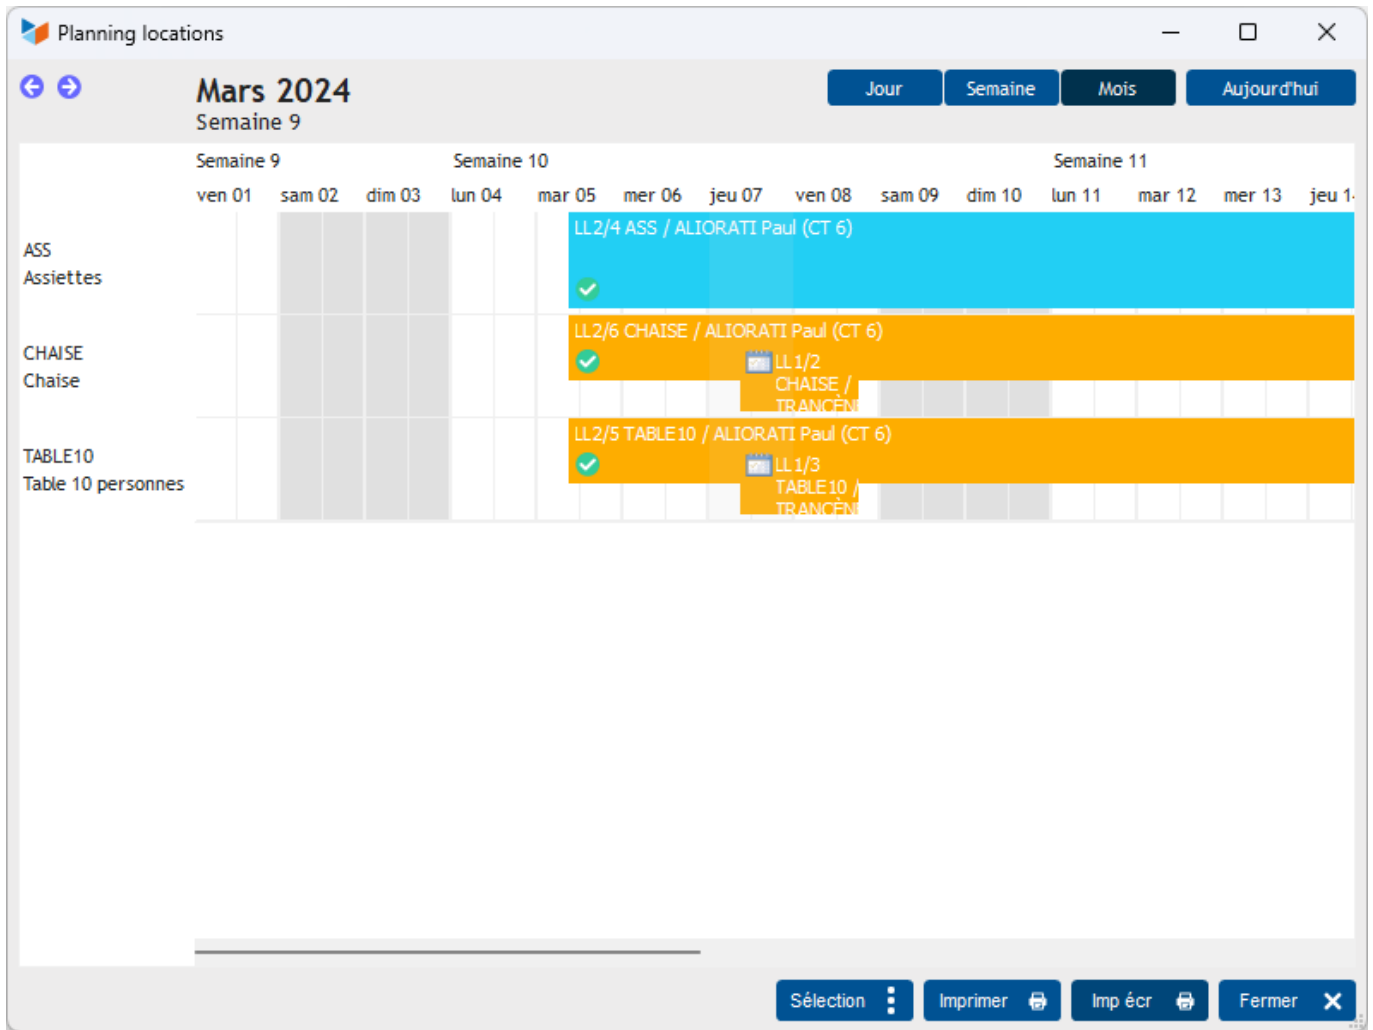

The schedule shows the renter's name as a resource.

Colors are displayed according to contact type.

Multiline rentals - detail mode

Access: via the **Dispos** button on the rental sheet in multiline rental mode

In this special mode, the schedule shows rentals for a series of machines.

In this way, it is possible to see whether equipment is in conflict for a particular rental.

Colors are displayed according to the type of machine.

In this example, we see that there is a date conflict.
