

Product families and sub-families

Fix Me! A1 proofreading not yet effective for this page. In the meantime, you can ask any questions on the [forum](#).

Products registered in Gestan must be classified into product families.

It is possible to have a second level of classification, the sub-family. They are useful if you manage a large number of products, or if you need more detailed statistical analysis.

The type can be used to classify services sold or purchased, for statistical or accounting purposes.

You can assign a color to the family, which will be displayed in the product list.

Default values can be specified for use in product creation.

Subfamilies

The screenshot shows the 'Familles et sous-familles de produits' window. The main table lists product families with columns: Id, Famille, and Type. The 'Famille' column is highlighted in orange for 'Fruits' and green for 'Légumes'. The 'Type' column shows icons and labels like 'fournitures', 'frais', and 'main d'œuvre'. On the right, there are buttons: 'Nouveau +', 'Modifier', and 'Supprimer'.

A modal window titled 'Sous-famille' is open, showing a form to create a new sub-family. The 'Famille' field is set to 'Fromages' and the 'Sous-famille' field is set to 'Pâtes cuites'. The modal has a blue '1' in a circle next to the 'Sous-famille' field. At the bottom of the modal are buttons: 'Valider ✓' and 'Annuler ✕'. A 'Fermer ✕' button is also visible at the bottom right of the main window.

In the same way as for families, it is possible to assign a color to subfamilies.
