# Products-Model

Fix Me! A1 proofreading not yet effective for this page. In the meantime, you can ask any questions on the forum.

Gestan allows you to manage :

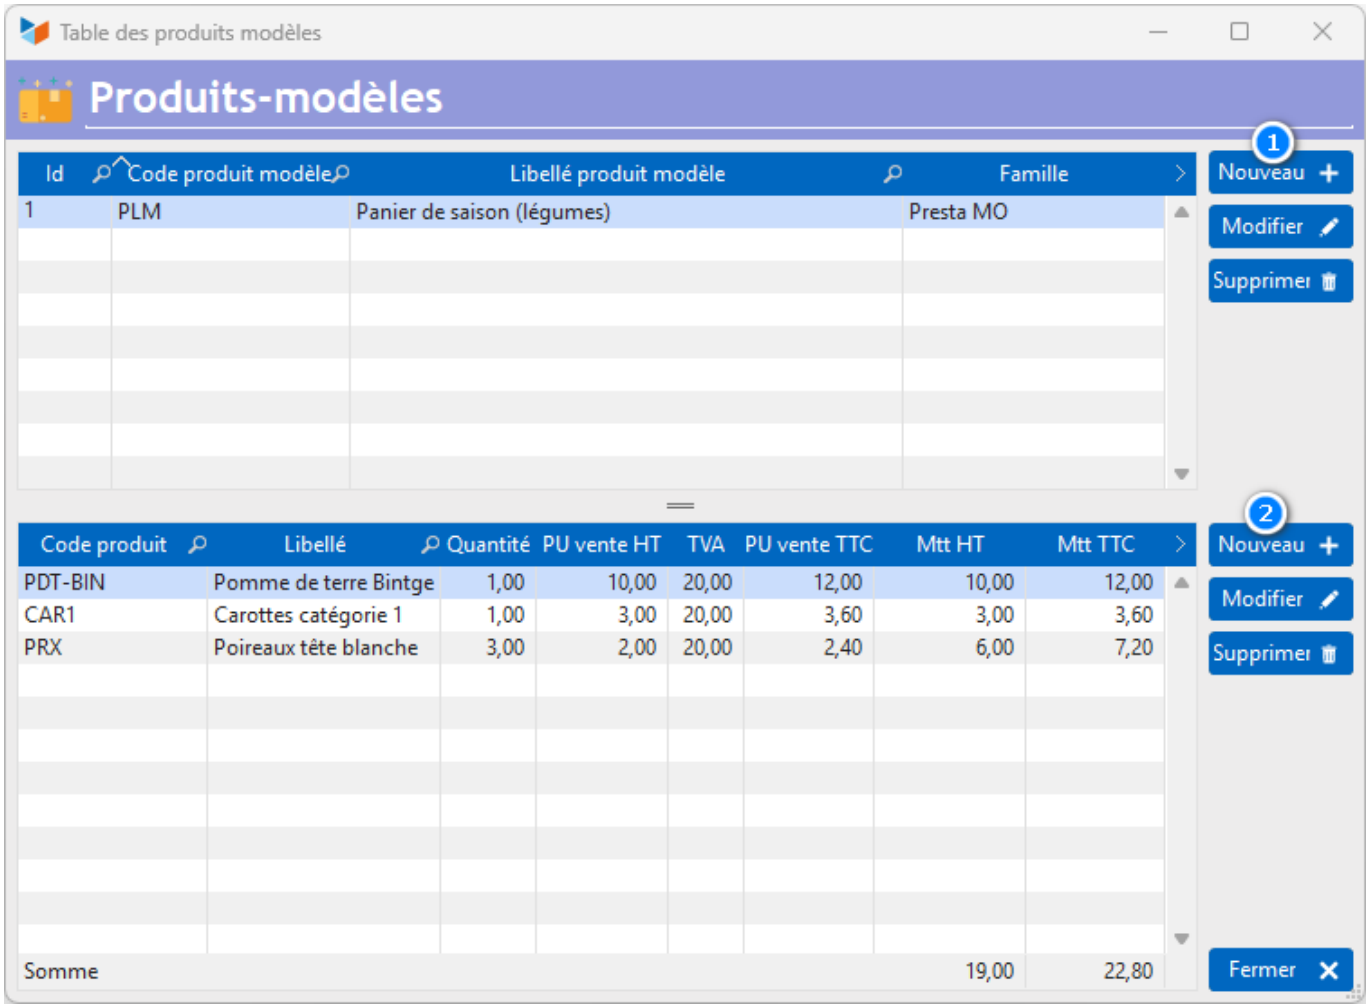

- model products
- compound products (or works in certain trades)
- equivalent products.

Model products are groupings of products that you usually sell together: for example, if you sell wines, you could make a model product that you'd call a “Discovery Pack”, made up of a bottle of white, a bottle of red and a bottle of rosé.

When you invoice your customer for a “Discovery Pack”, the invoice will have three lines, one for each bottle, as opposed to the composite product, with which the invoice would only have one line.

## How to use the screen

***Access :*** *Products → Compound products*

At the top, the **New** 1 button is used to create a new product model.

At the bottom, the **New** 2 button is used to add a product to the product-model.

Quantities can be modified directly in the base (or via the contextual menu).

### Bottom table context menu

The contextual menu allows you to move up or down the rows.
