Product refills

Fix Me! A1 proofreading not yet effective for this page. In the meantime, you can ask any questions on the forum.

This screen displays, for a customer, all the products quoted, ordered, invoiced, or delivered.

It provides useful information to sales departments, particularly field salespeople: before a customer visit, it is advisable to have the list of products ordered by the customer, in order to consider refill orders.

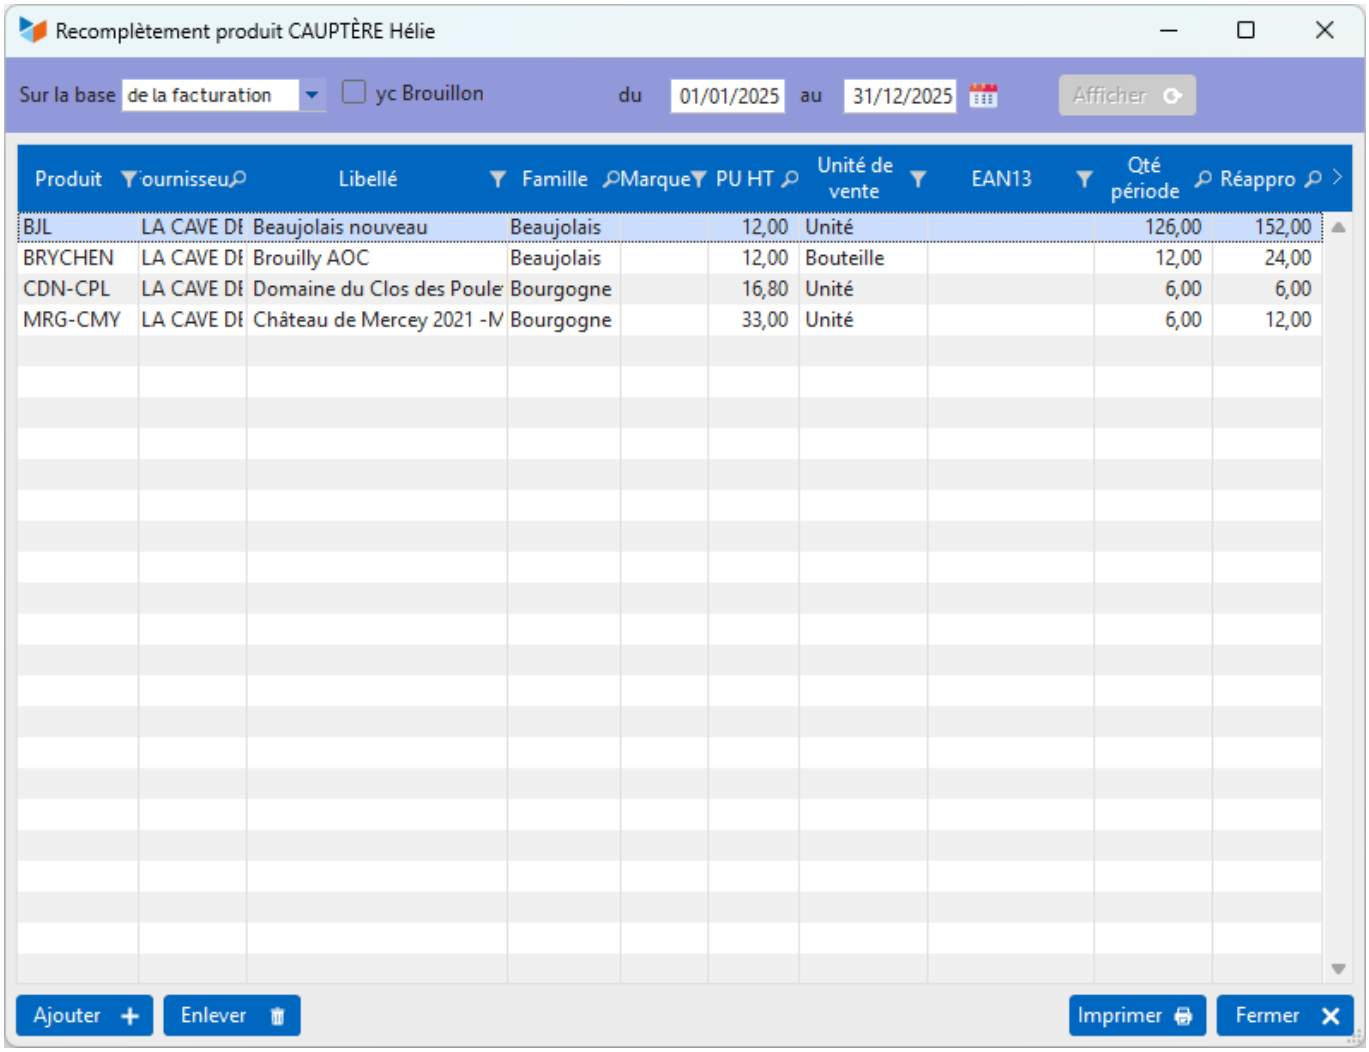

It allows you to print a completion sheet.

Using the screen

//**Access :**

- contact list → context menu → commercial information → recompletion
- product list → Parts → select customer → Recompl
- Statistics → Product Statistics → Recompl

//

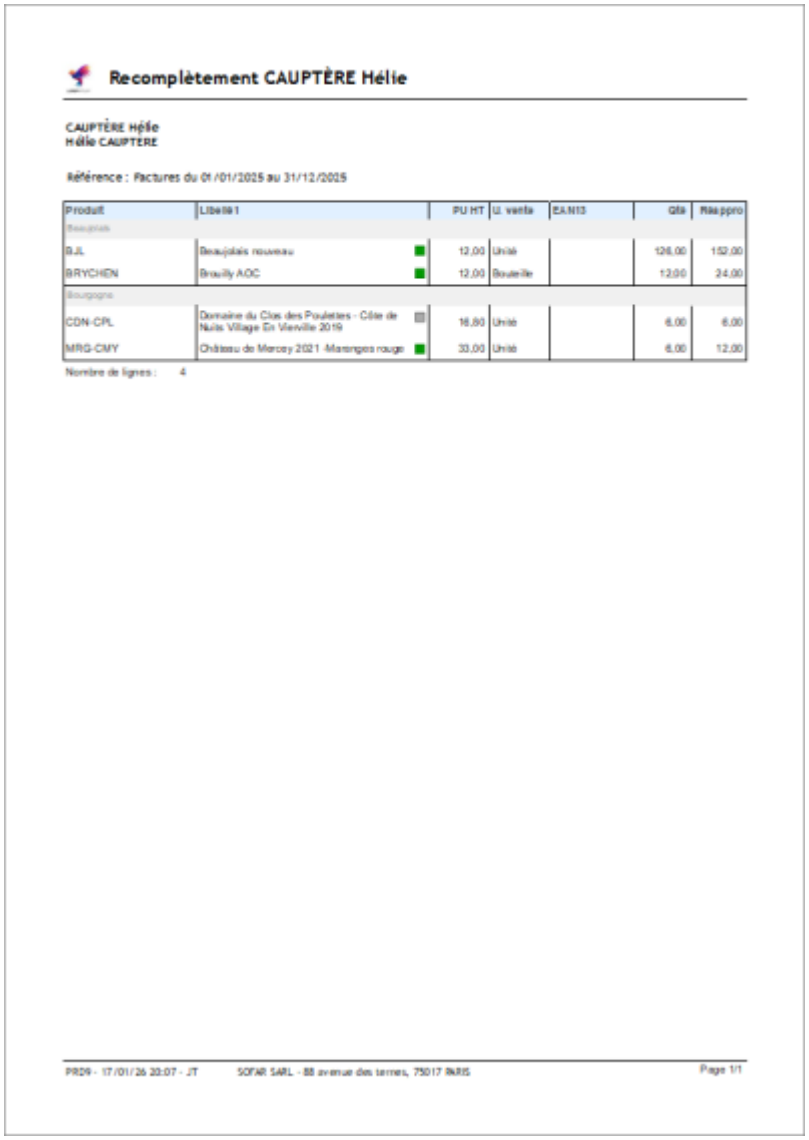

The screen allows you to enter two optional dates (if they are not entered, the calculation is carried out without notion of period).

The **Show** button triggers the display of the products concerned by the operation specified in the **On base** combo.

The **Restock** column can be entered: it is possible to enter the quantities to be restocked. The **Replenishment with period qty** option from the table context menu allows you to populate the **Replenishment** column with the contents of the **Period qty** column.

It is possible to **add** products and **remove** them.

The **Print** button triggers the printing of the completed form (PRD9) ready to be negotiated with the customer.
