

Exchange rates

 **Fix Me!** A1 proofreading not yet effective for this page. In the meantime, you can ask any questions on the [forum](#).

This screen is used to store exchange rates between currencies.

Using the screen

The screenshot shows the 'Exchange rates' application interface. At the top, there's a header bar with the title 'Exchange rates' and a search icon. Below the header is a table with columns: Currency A, Currency B, Date, Tx change, Creation, by, Change, and by. The table contains two rows of data:

Currency A	Currency B	Date	Tx change	Creation	by	Change	by
EUR	USD	13/11/2023	1,140000	13/11/23 12:15	CA		
CFA	EUR	13/11/2023	0,001524	13/11/23 12:15	CA	13/11/23 12:15	CA

On the right side of the table, there are three buttons: 'New +', 'Edit', and 'Delete'. A modal window titled 'Exchange Rate Sheet' is open in the foreground. It has a header bar with the title 'Exchange rates' and a search icon. The modal contains the following fields and buttons:

- Currency A: CFA (with a dropdown arrow)
- Currency B: EUR (with a dropdown arrow)
- Evaluation date: 13/11/2023 (with a calendar icon)
- Exchange rates: 0,001524 (with a currency icon)
- Buttons: 'Validate' (with a checkmark) and 'Cancel' (with an X)

At the bottom of the modal, there is a section titled 'Au 13/11/2023 :' with two lines of text:

- Un CFA vaut 0.0015 EUR
- Un EUR vaut 656.168 CFA

At the bottom right of the modal, there is a 'Close' button with an X icon.

The current exchange rate between currency A and currency B is stored.

To avoid duplicate entries such as CurrencyA→CurrencyB and CurrencyB→CurrencyA on the same day, data is managed in alphabetical order. For example, to manage rates between CFA and euro, you'll always have CFA→EUR, while between euro and dollar, you'll always have EUR→USD.
