Stock levels by location

Fix Me! A1 proofreading not yet effective for this page. In the meantime, you can ask any questions on the forum.

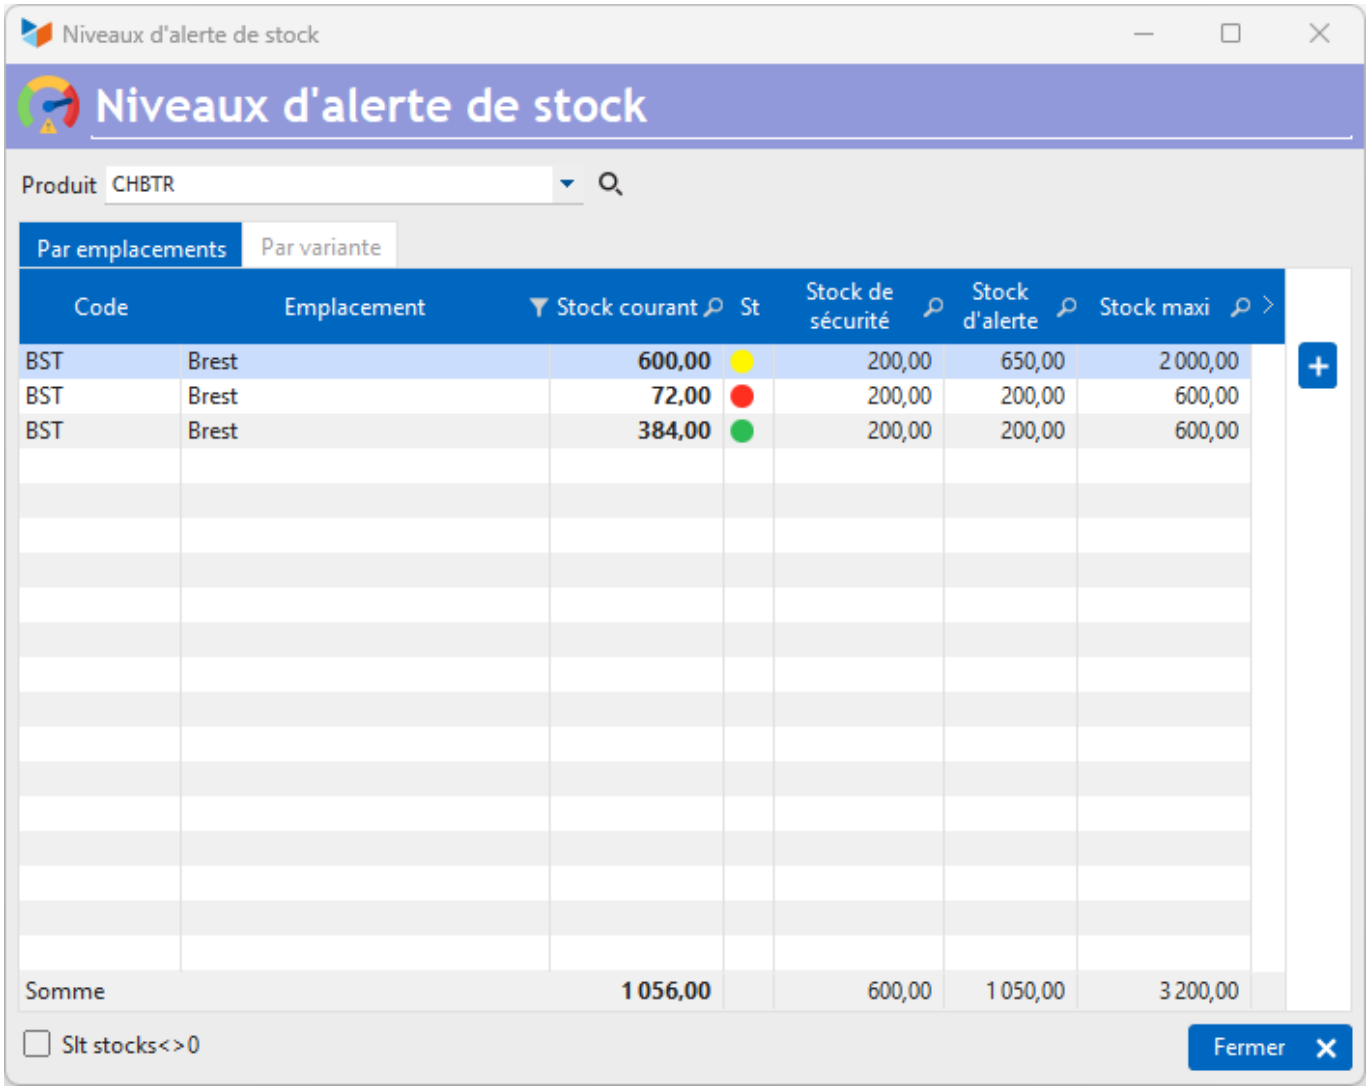

Gestan allows you to manage stocks, including alert, safety and maximum stock levels.

If you manage stock locations, you can manage these levels

- either globally: levels are entered on the product sheet
- or on a detailed basis: levels are entered for each of the locations managed.

Using the screen

Access : *Products→Levels by location*

The screen allows direct entry of levels, for each line presenting the locations. The **Apply** button enables immediate updating, which is automatically performed at line exit.

The table context menu opens the location transfer screen.
